

INSTANT CAB

Product Requirements Document (PRD)

Theme: Smart, Affordable & Transparent Cab Booking

Product concept: A cab-booking platform inspired by the service model of established outstation cab services, with an original Instant Cab brand and user experience.

Key differentiators

- Fixed-price rides with the fare shown before confirmation.
- Package plans for frequent users.
- Local rides for journeys above 20 km.
- Simple booking flow designed for mobile, tablet and desktop.
- Backend and database-ready architecture.

Prepared as a project PRD based on the structure of the supplied Vibe Coding PRD template.

1. Product Overview

Product Name: Instant Cab

Theme: Smart & Affordable Cab Booking

One-Line Product Description: Instant Cab is a user-friendly cab booking platform for outstation, one-way, round-trip and local journeys, with transparent fixed prices and flexible package plans.

Product Goal: Make cab booking faster and easier by showing clear fares, reducing pricing confusion and giving users practical ride and package choices.

Core value: Users can enter their journey, compare available cab options, see the applicable fare, choose a package where suitable, and confirm a ride with minimum friction.

2. Target Users

- Students and young users who want simple and affordable booking.
- Working professionals and daily commuters.
- Families travelling between cities.
- Tourists and occasional travellers.
- Frequent users who can benefit from package plans.

User needs: Transparent pricing, quick booking, reliable ride information, easy payment, booking history and simple support.

Desired emotions: Trust, confidence, simplicity and convenience.

3. Core User Problem

Problem: Cab users can face confusing fare calculations and may not know the final cost before booking.

Current Difficulty: Pricing may depend on distance, vehicle type, route and other conditions, making comparison difficult.

Our Solution: Instant Cab presents fixed-price routes where applicable, a clear local-ride pricing structure for journeys above 20 km, package plans and a short booking journey.

4. Product Features

Must-Have Features

- Outstation one-way booking
- Round-trip booking
- Local rides above 20 km
- Fixed-price route catalogue
- Cab type selection
- Date and time selection
- User registration/login
- Booking confirmation
- Payment record
- Booking history
- Package purchase and usage
- Ratings and feedback
- Admin management of routes, fares, packages, drivers and bookings.

4. Product Features — continued

Nice-to-Have Features

- Live ride tracking
- Coupons and referral rewards
- Driver document verification workflow
- Notifications through email/SMS/push
- Corporate booking and invoicing

5. User Flow

Home → Enter Pickup & Destination → Select Trip Type → Select Date/Time → View Cab Options → View Fixed/Calculated Fare → Choose Cab → Confirm → Payment → Booking Confirmation → Ride → Rating

For packages: Home → Packages → Select Plan → Purchase → Package Balance → Book Eligible Ride → Balance Updated.

6. Required Screens / Pages

- Home/Landing Page
- Outstation Booking
- One-Way Booking
- Round-Trip Booking
- Local Ride (>20 km)
- Fixed Prices
- Package Plans
- Cab Details
- Checkout/Payment
- Booking Confirmation
- My Bookings
- Package Wallet/Usage
- Profile & Settings
- Help/FAQ
- Contact/Support
- Admin Dashboard
- Driver Management
- Vehicle Management
- Pricing Management

7. UI / UX Design Requirements

- Clear visual hierarchy and one primary action per screen.
- Simple forms with helpful labels and validation.
- Fare displayed prominently before booking confirmation.
- Consistent buttons, cards, spacing, icons and typography.
- Accessible contrast, readable text and touch-friendly controls.
- Clear loading, error, empty and success states.

- Responsive behaviour across mobile, tablet, laptop and desktop.

8. UI Inspiration

Use established cab-booking patterns and general design inspiration for information architecture, card layouts, booking forms and navigation. The Instant Cab interface must remain an original design and must not directly copy another company's branding, text or visual design.

Useful inspiration categories: modern mobility apps, travel booking interfaces, Material Design patterns and contemporary responsive web products.

9. Visual Design Direction

Brand personality: Modern, Friendly, Trustworthy, Fast, Affordable

Suggested palette: Deep blue for trust, white/light backgrounds for clarity, orange as an action accent, dark gray for readable text.

Use rounded cards, clear fare badges, route icons, spacious forms and strong primary call-to-action buttons.

10. Typography

- Primary font: Inter or another highly readable sans-serif.
- Large, bold headings for key decisions.
- Medium-weight labels for forms and fare information.
- Readable body text with comfortable line spacing.
- Large touch-friendly button text on mobile.

11. Design Principles

- Simplicity: reduce unnecessary steps.
- Visual hierarchy: show the next action immediately.
- Consistency: reuse components and patterns.
- Feedback: confirm important actions.
- Accessibility: support different screen sizes and users.
- Trust: make fare, vehicle, route and booking details easy to verify.

12. Responsive Design

The product must work well on mobile, tablet, laptop and desktop. Mobile layouts should use stacked booking forms, bottom-friendly actions and touch-sized controls. Desktop layouts can use multi-column cards and route comparison panels. Do not merely shrink the desktop design.

13. Navigation

Desktop: Instant Cab | Home | Book Cab | Fixed Prices | Packages | Local Ride | My Bookings | Help | Profile

Mobile: Logo + menu with the primary Book Cab action clearly accessible.

14. Important UI Components

- Navbar
- Hero booking widget
- Location inputs
- Date/time picker
- Trip-type tabs
- Cab cards
- Fixed-price badges
- Package cards
- Fare summary
- Payment form
- Confirmation modal
- Toast notifications
- Loading skeletons
- Error states
- Empty booking state
- Footer
- Admin tables and filters

15. Content Requirements

Use realistic, concise content rather than placeholder lorem ipsum. Example messaging:

- “Your ride. Your price. No surprises.”
- “Fixed Price — Know your fare before you book.”
- “Local rides above 20 km made simple.”
- “Choose a package and save on frequent rides.”

16. Technical Requirements

- Frontend: HTML5, CSS3 and JavaScript, with responsive component-based UI.
- Backend: A scalable server-side application/API layer.
- Database: SQLite for development; PostgreSQL or another production-grade relational database recommended for production.
- Architecture: Modular services/components for accounts, bookings, pricing, packages, drivers, vehicles, payments and reviews.
- Requirements: reusable components, clean structure, secure forms, validation, authentication, responsive UI, maintainable code and functional navigation.

17. Backend & Database Requirements

- Use clear routing and server-side/API logic for booking flows.
- Use reusable templates/components or a separated frontend where required.
- Use an ORM or data-access layer for users, routes, fares, packages, bookings, drivers, vehicles and payments.
- Provide an administrative interface for operational management.
- Use authentication and permission controls for customers, drivers and administrators.

18. Interaction Requirements

- Hover, focus and active states.
- Fare calculation/loading feedback.
- Booking success confirmation.
- Validation for invalid locations or missing fields.
- Subtle transitions and micro-interactions.
- Clear payment success/failure states.

19. UX Psychology

- Show the user's immediate task first: booking a ride.
- Reduce hesitation by showing the fare before confirmation.
- Use familiar labels such as Pickup, Destination, Date and Time.
- Keep important information visible without overwhelming the user.
- Build trust with transparent fare summaries and clear booking confirmations.

20. Product Personality

Modern • Friendly • Trustworthy • Fast • Minimal

Every interface decision should reinforce these qualities.

21. Edge Cases

- No route/fare available.
- Pickup and destination are identical.
- Invalid or incomplete booking details.
- No cab available.
- Payment failure.
- Booking cancellation.
- Expired package.
- Package ride balance reaches zero.
- Long route names or addresses.
- Slow network/loading state.
- Small-screen layouts.
- Driver assignment failure.

22. Final Quality Requirements

- UI is visually polished and consistent.
- Booking flow is clear and functional.
- Fixed prices display correctly.
- Package purchase and usage are tracked correctly.
- Local ride logic supports journeys above 20 km.
- Navigation and buttons work.
- Forms validate correctly.
- Responsive layouts work across devices.

- Authentication is secure.
- Loading, empty, error and success states are handled.
- No obvious broken layouts or unnecessary components.

23. Instant Cab Pricing & Package Specification

A. Fixed Price Routes

Sample Route — Cab — Fixed Fare

Coimbatore → Tiruppur — Sedan — ■899

Coimbatore → Pollachi — Sedan — ■749

Coimbatore → Mettupalayam — Sedan — ■699

Coimbatore → Ooty — Sedan — ■1,499

Sample fares are prototype values and should be configurable through the application's administrative interface.

B. Local Ride — Above 20 km

- 0–20 km: standard local fare rules.
- Above 20 km: eligible for the Instant Cab local-ride pricing system.
- The final fare must be shown before confirmation.
- Distance slabs and rates must be editable by an administrator.

C. Package Plans

Daily Saver: ■499 — 5 rides — 30 days

Monthly Commuter: ■1,999 — 20 rides — 30 days

Business Pack: ■3,499 — 40 rides — 30 days

Package pricing and benefits should be configurable rather than hard-coded.

D. Core Data Models

User, Driver, Vehicle, Route, FixedPrice, Package, UserPackage, Booking, Payment and Review.

Example FixedPrice fields: pickup, destination, cab_type, distance, fixed_price, active.

Example Package fields: name, price, ride_count, validity_days, discount, description, active.

E. Final Product Instruction

Build Instant Cab as an original, presentation-ready cab booking product with a service model comparable to established outstation cab platforms, while maintaining its own branding and interface. Prioritize transparent fixed prices, package plans, local rides above 20 km, a simple booking journey, responsive UX and a scalable backend/database.
